Education

B.Tech in Computer Science Engineering (AI/ML)

VIT Bhopal University, Madhya Pradesh

2023 – 2027

CGPA: 8.63/10

Class XII

Prasad International School

2021 – 2022

Percentage: 69%

Class X

Prasad International School

2019 – 2020

Percentage: 72.6%

Technical Skills

Programming Languages: Java, Python

Development: HTML, CSS, React.js, Node.js, Express.js, RESTful APIs

Databases: MongoDB, MySQL

AI/ML: Scikit-learn, Pandas, Machine Learning

Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS)

Tools: Git, GitHub, Microsoft Excel, Google Sheets

CRM & RevOps: HubSpot CRM (Fundamentals), CRM Fundamentals, Lead Management, Sales Pipeline Basics, Business Process Mapping, Workflow Automation (Basics), Reporting & Dashboards (Basics), Data Structuring Basics

Projects

QuickDine – Online Restaurant Booking Platform

2026

Tech Stack: MERN Stack, TypeScript, Node.js, Express [GitHub](#) | [Live Demo](#)

- Built a full-stack food ordering platform with a TypeScript React client and a Node.js/Express server, supporting menu browsing, order placement, and live order tracking.
- Architected a client-server system with RESTful APIs for menu management, cart operations, and order processing, improving code maintainability and scalability.
- Implemented type-safe, responsive UI components with efficient state management to streamline the cart and checkout flow across devices.
- Shipped the client to Vercel using CI-based builds, resulting in a fast, publicly accessible live demo.

MediAura – AI Medical Chatbot

2026

Tech Stack: Python, Flask, LangChain, Google Gemini, Pinecone, Hugging Face [GitHub](#) | [Live Demo](#)

- Built a Retrieval-Augmented Generation (RAG) medical chatbot using LangChain and Google Gemini 2.5 Flash to deliver context-aware, symptom-based guidance.
- Implemented a Pinecone vector database with HuggingFace embeddings for semantic document retrieval, improving response accuracy and relevance.
- Designed a modular Flask backend to handle query processing, embedding generation, and LLM response orchestration.
- Hosted the application on Render with environment-based configuration, resulting in a stable, publicly accessible live demo.

Diabetes Prediction System

2025

Tech Stack: Python, Streamlit, Scikit-learn, Pandas, NumPy [GitHub](#) | [Live Demo](#)

- Built a supervised machine learning pipeline with Scikit-learn, achieving 77% accuracy on diabetes risk classification from clinical datasets.
- Performed data preprocessing, feature engineering, normalization, train-test splitting, and hyperparameter tuning to boost model reliability and generalization.
- Benchmarked multiple classification algorithms against precision, recall, and F1-score to select the best-performing model.
- Published the model as an interactive Streamlit web app, enabling real-time diabetes risk predictions through a simple, accessible interface.

Achievements

- Developed AI-powered and full-stack applications using the MERN stack and machine learning.
- Built secure RESTful APIs with JWT authentication and MongoDB integration.
- Achieved 77% accuracy in a diabetes prediction model using Scikit-learn.
- Completed certifications in Machine Learning, Cloud Computing, IoT, and MATLAB.
- Recognized as a Top 10,000 Contributor in Hacktoberfest 2025 for 6 successfully merged pull requests.

Certifications

- Machine Learning with Python – IBM.
- NPTEL Cloud Computing – IIT Kharagpur.
- NPTEL Internet of Things (IoT) – IIT Kharagpur.
- Oracle Certified Foundations Associate – Agentic AI, Oracle.
